WORK EXPERIENCE

● INCOTECH SYSTEM REACT DEVELOPER JR

JUL 2023 - AHORA

During my time as a React Developer from July 2023 to the current date, I have played a crucial role in translating design concepts into functional code. This involves not only understanding the aesthetics and usability of the design but also effectively implementing them in the application. I have worked on creating highly reusable React components, which means these elements can be easily adapted and reused in different parts of the application, thereby improving development efficiency and maintaining consistency in the user interface. To further enhance the quality and functionality of my projects, I have integrated technologies such as Node.js, Next.js, and NX. In addition to working on the frontend, I have been responsible for seamlessly integrating these components with backend services. This involves designing and consuming APIs that provide the necessary data for the application. During this process, I have gained experience in using APIs such as SUPABASE and STRIPE.

FLEXTRONICS AGUASCALIENTES BECARIO/PRACTICANTE

AUGUST 2022 - JAN 2023

During my time at Flex, I helped create dashboards and programs of various types using C#, .NET Framework, and various programming libraries. Additionally, I utilized SQL Server databases. In some significant projects, I also worked with additional libraries for specific functionalities, such as generating PDF files and QR codes.

The most significant projects I was involved in focused on package tracking, metrics, and assembly and production time across different areas. This involved developing systems to track package movement throughout the supply chain, analyzing data to assess the performance and efficiency of different processes, and optimizing production and assembly times in various areas of the company.

● GITHUB AND STACKBLITZ REPOSITORY

Throughout my academic career, I have completed various projects which I have uploaded and published on my StackBlitz and GitHub profiles.
